INFRA RED THERMOMETER

TO MEASURE  TO KNOW

Infrared-Thermometer

With the BEAM infrared thermometer you can **measure the temperature of surfaces** quickly and easily, without touching them. Just point to the object, push the button and within a second the temperature is displayed.

The built-in **laser pointer** helps you to target the measurement spot. The current temperature and the maximum measured value is displayed on the back illuminated display.

Easy to use

The **applications** of infrared thermometers **are varied**. You can use it to monitor air-condition and heating systems, look for cold spots and faulty windows or check the braking system in a car. Check the temperature of baby food, beverages, bathing, cooking oil, jam or melted chocolate!

Infrared-Technology

Non-contact measurement by proven infrared technology. This works by the surface emitting infrared radiation above the absolute zero point, converted into an electric signal, evaluated by a processor, and then displayed on the display.

- Non-contact measurement of surface temperatures
- Display of the current and maximum temperature during the measurement process
- Laser for targeting

Technical data:

- Measuring range: -38°C tot +365°C (-36°F tot 689°F)
- Back-illuminated display
- Dimensions: 40 x 85 x 175mm
- Weight: 151g
- Including batteries (2 x 1,5V AAA)
